

RFDS Complex Patient Ambulance Vehicle

RFDS provides Complex Patient Ambulance Vehicles (CPAVs) capable of providing care for bariatric patients up to 500kgs and who may also be upgraded to High Acuity for critically ill patients.

Our CPAV platform is fitted with the appropriate equipment and consumables necessary to service the needs of bariatric patients.

With appropriate medical escort we can accommodate:

- ✓ **Critically ill patients who may be unstable, requiring ongoing active clinical management and/or ventilated support**
- ✓ **Critically ill patients requiring extracorporeal membrane oxygenation (ECMO) during transport**
- ✓ **Critically ill patients requiring intra-aortic balloon pump support (IABP) during transport**

RFDS CPAV fleet is crewed by highly trained staff for complex or bariatric patients, and can include a Critical Care Registered Nurse depending on the patient's condition.

Across Australia, our Mobile Patient Care transport services are supported by our aircraft which are equipped for medical care, with the skilled support of a fully qualified Patient Transport Officer, Critical Care Nurses, specialist doctors as required and experienced pilots.
