

RFDS High Acuity

Transporting High Acuity patients with care, in the air and on the road.

The RFDS High Acuity fleet is configured to transfer patients requiring active care and treatment during transport.

Our Critical Care Nurses are experienced and accredited in ED and ICU environments to ensure the patient's High Acuity treatment regime continues throughout their journey between healthcare facilities.

RFDS High Acuity can transport patients with:

- ✓ an arterial line
- ✓ a vasoactive and/or anti-arrhythmic drug infusion
- ✓ a pacing wire
- ✓ a central venous or intercostal catheter
- ✓ an insulin infusion
- ✓ an IV cannulation

RFDS Clinicians are available 24/7 to assist hospital staff with decision making on the appropriate platform choice of High Acuity or Emergency transport, considering patient condition and NEPT protocols.

Our equipment

Our High Acuity platform can also provide for complex or bariatric patients.

High Acuity vehicles are fitted with the equipment and consumables necessary to deliver patient and client needs:

- ✓ B Braun syringe pumps
- ✓ Zoll X Series patient monitor with pacing and defibrillation capability
- ✓ Vacuum mattress (VACMAT)

We can also facilitate and manage doctor escorts with hospital supplied equipment.

Make a booking

Call **1300 887 678** to make a booking or inquiry. Please include any relevant patient requirements such as:

- ✓ Medical escorts
- ✓ Luggage requirements
- ✓ Family/carer escort to travel with patient

For long distance High Acuity patient services, we recommend pre-booked transports.

Call **1300 887 678** to make an enquiry or go to rfdsmc.com.au for more information.
