

# RFDS Patient Transport by Air

The Royal Flying Doctor Service has a proud history of aeromedical transport across Australia, providing the highest care in the air or on the ground.

We transfer non time critical low, medium and high acuity patients requiring further care in a tertiary hospital or transferral closer to home and loved ones.

All patients are cared for by an aeromedically trained Critical Care Registered Nurse (CCRN) in a comfortable and caring environment. Our aircraft are fitted with a range of basic and advanced life support and monitoring equipment.

Our service provides patient transport between towns and cities throughout Australia.

**We transport to and from locations with suitable airstrips, coordinate a bed-to-bed service, and offer road transfers to and from the aircraft.**

## Our aeromedical transport service provides:

- ✓ High, medium or low acuity care
- ✓ Experienced critical care flight nurse escort
- ✓ Aeromedically equipped, twin engine Beechcraft King Air aircraft
- ✓ Pressurised cabin to enable comfortable flying at higher altitudes
